

Custom E-Commerce Website Proposal

Hi,

Following our discussion, I've refined everything based on your current website and the improvements you're looking for.

The goal is simple

To build a more premium, more refined, and fully custom eCommerce website that removes the current limitations and gives you complete control over design and future updates.

What You Will Get

A fully custom designed website with a unique and modern UI that feels high-end and branded.

Better product presentation so each item looks clean, detailed, and more appealing for customers.

Smooth browsing experience with fast loading and smart filtering so users don't feel any lag.

A simple and clean checkout process that helps reduce drop-offs and improves conversions.

Core Strengths

The website will be built with clean code which helps in better SEO performance and long-term growth.

You will have full flexibility to add product variations like size, color, or bundles easily.

A custom admin panel will allow you to manage products, stock, and orders anytime.

The system will remain flexible for future features without platform limitations.

Mobile-first design so the experience feels smooth and premium on phones.

Why This Upgrade Matters

Your current website is already good, but it has limitations in design flexibility and future expansion.

With this custom build, you will get a more polished UI, better performance, and complete freedom to scale.

Timeline & Cost

Total Cost is 80,000 PKR

40,000 PKR advance to start

40,000 PKR on completion

Delivery time will be 15 days InshaAllah.

Next Step

If everything looks good, I can share payment details and start the work immediately.
